

## ***What is web content outline?***

Once you know the goals of your website; what your owners/stakeholders want to communicate and what your intended visitors need and want, you are ready to start organizing your content. This can be done with a simple outline of proposed page titles. If you have the skill to create a chart, that works, too. Your outline will look something like this:

### I. Homepage menu item

#### a. Subtitle

##### i. Sub-sub-title

##### ii. Sub-sub-title

#### b. Subtitle

##### i. Sub-sub-title

##### ii. Sub-sub-title

We had an interview with libraries and each Library officials said for us needs.

## ***Interview with Resalat-Library***

- 1) Our center has a gallery. In this gallery, we learning and make and sell works of art created, Should be placed on a web page a picture or slide-show to advertise on this picture or art
- 2) We have a library about 6,000 books exist in this library and who are member of Library from this book can be used. And take from this book, They can study at home. We need a website list of books put at the website so that easy work for reader
- 3) We have in this center some of the courses like math, Koran, English, Computer...also have announcements for courses and need to one page advice We need a page that his paintings to the advertising.

### ***Interview with Sadiqia-Library***

- 1) We have a library about 9,000 books exist in this library and who are member of Library from this book can be used. And take from this book, They can study at home. We need a website list of books put at the website so that easy work for reader and also create one space for put books software in this part and readers can download from this books and all of this books in this library is category and also We also buy the book for people

### ***Interview with Amma-Library***

- 2) We should be have a virtual library If who want the books can be download from here and all of the books should be listed and category.

### ***What we did?***

Using interviews we've designed something that is acceptable for all of Libraries
